Summary
Full stack developer (React, Next.js, Node.js, PostgreSQL) currently interning at Tridhya Tech, where I built and deployed SupportHub, an AI-powered real-time ticket management platform. Experienced in authentication and RBAC, Socket.IO real-time systems and TypeScript.

Education
Bachelor of Technology (BTech) - Computer Science | Indus University | 10 SGPA *2021 – 2026*

Experience
Full Stack Intern | Tridhya Tech *July 2026 – Continue*

- Completed structured MERN training (TypeScript, React, Redux Toolkit, Next.js, Node/Express, MongoDB, SQL) and built apps including an event management platform, a library system and an e-commerce app with Jest and React Testing Library tests.
- Deployed SupportHub to production with Docker, Vercel, Neon and Upstash, and diagnosed production-only issues: cross-domain cookies, WebSocket scaling and upload size limits.

Full Stack Developer Intern | Lit Amor (Remote) *July 2025 – Sept 2025*

- Developed **"Solo Sparks"**, a self-discovery feature that analyzed user moods and behavioral patterns to recommend personalized activities.
- Built and deployed a **React.js + Tailwind CSS** interface with multimedia reflection portal, onboarding flow, and reward tracking dashboard this improved navigation and user engagement by **20%**.

Projects
SupportHub (AI-Powered Ticket Management)

- Built a ticketing platform for four roles (Customer, Agent, Developer, Admin) with JWT httpOnly-cookie auth, server-side RBAC and per-ticket ownership checks.
- Implemented real-time chat and live status updates with Socket.IO, scaled across instances with a Redis adapter.
- Integrated Gemini for category and priority suggestions, reply drafts and conversation summaries, with a graceful fallback when the AI is unavailable.
- Built SLA tracking with scheduled breach detection, email alerts and admin dashboards for compliance and team performance.
  Tech Stack: Next.js, TypeScript, Redux Toolkit, Node.js, Express, PostgreSQL, Prisma, Socket.IO, Redis, Docker

Inkverse (Book Publishing Platform)

- Engineered a multi-role marketplace dashboard for Readers, Authors, and Print Vendors, structuring a secure PostgreSQL database schema with Prisma ORM to handle concurrent inventory, reviews, and wallets.
- Optimized storefront catalog lookup times by 40% by implementing a dynamically compiled query compiler in Node.js/Express, supporting complex multi-clause search operations and relational aggregates
- Minimized frontend network requests by 65% by integrating Tanstack Query caching with URL query-string serialization
  Tech Stack: React.js, Node.js, Express.js, Prisma ORM, PostgreSQL, Tailwind CSS, Tanstack Query

Remote Assistance & Monitoring System (God's Eye)

- Integrated Isolation Forest anomaly detection, K-Means behavior clustering, and XGBoost productivity prediction into a unified React dashboard.
- Achieved **85–90% anomaly detection accuracy** at under **10ms inference** with real-time WebSocket-based screen sharing and remote control.
  Tech Stack: Python, FastAPI, WebSocket, React, Tailwind CSS, SQLite

Technical Skills
Programming Languages: JavaScript, TypeScript, Java, Python
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, TanStack Query,
Backend: Node.js, Express.js, REST APIs, Socket.IO, FastAPI
Databases: PostgreSQL, MongoDB, MySQL, Prisma, Mongoose, Redis
Security and testing: JWT, RBAC, bcrypt, Zod, Jest, React Testing Library
Other Skills: Git, GitHub, Docker (basics), Vercel, Postman

Key Achievements: Secured 1st place in HackaTheStack-I and 3rd place in HackaTheStack-II organised by StackCode Training Institute (2026)
